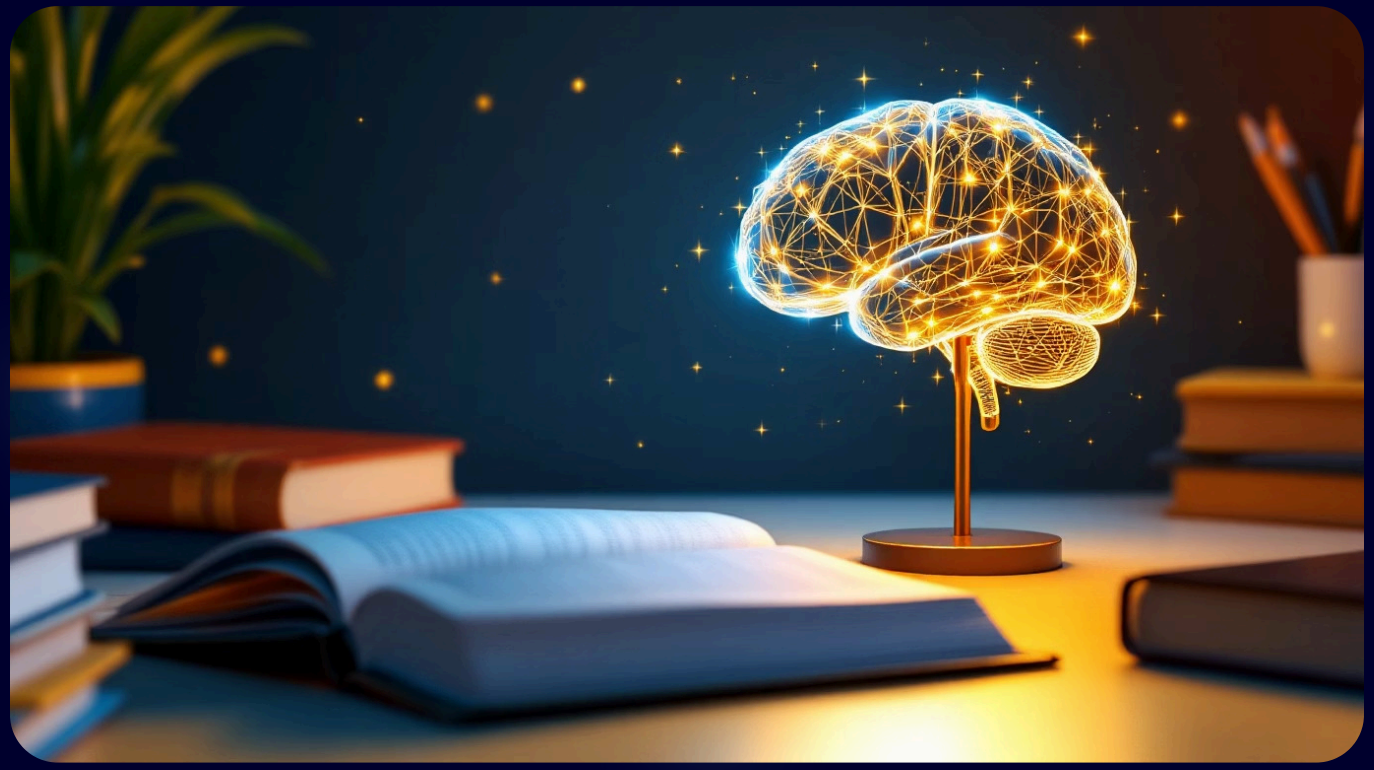
Retrieval-Augmented Generation (RAG)

An architectural framework that empowers Large Language Models with access to trusted, external knowledge — delivering precise, grounded, and up-to-date responses.

Made with GAMMA



CORE CONCEPT

What is RAG?

RAG combines the **creative power of LLMs** with the **precision of information retrieval** — think of it as giving the model an open-book exam instead of relying purely on memory.

Standard LLM

A student recalling answers from memory — limited by training data and a fixed knowledge cutoff.

RAG-Enhanced LLM

A student with access to a trusted textbook — retrieves facts in real time, grounded in verified sources.

TECHNICAL WORKFLOW

How RAG Works

Input Retrieval Augmentation Generation

The key innovation is the **Vector Database** — a semantic index that matches queries to the most relevant document chunks, ensuring the model always reasons from verified, current information.

Made with GAMMA

Key Benefits of RAG

Reduced Hallucinations

Anchoring responses to cited sources dramatically lowers the risk of fabricated or misleading facts.

Always Fresh

No training cutoff limitations — connect to live data or the latest internal reports at any time.

Cost-Efficient

Updating a document database is orders of magnitude cheaper than retraining a large neural network.

Full Transparency

Every answer comes with a traceable audit trail — users see exactly which documents informed the response.

RAG IN ACTION

Real-World Use Cases

Enterprise Search

Query internal wikis, HR policies, and technical documentation with natural language — no more digging through folders.

Customer Support

AI chatbots grounded in the latest product manuals deliver accurate, consistent answers at scale.

Legal & Medical Research

Rapidly surface precise citations from vast libraries of case law, clinical trials, or regulatory filings.

Academic Assistance

Synthesize summaries and insights from a curated set of research papers or course materials.

STRATEGIC DECISION

RAG vs. Fine-Tuning

Both techniques extend LLM capabilities — but they solve **different problems**. Use RAG when you need current, verifiable knowledge access. Choose fine-tuning when you need to reshape model behavior or adopt a specialized linguistic style.

For most enterprise fact-heavy applications, **RAG offers a faster, cheaper, and more transparent** path to production than fine-tuning.

Feature	RAG	Fine-Tuning
Primary Goal	Knowledge Access	Style / Behavior
Update Speed	Instant	Slow (Retraining)
Cost	Lower	Higher
Transparency	High (Citations)	Low (Black Box)
Best For	Fact-heavy apps	Niche styles
